

Just installed a Steam update (API v020, package versions 1663887315) and now every time I try to open Cities: Skylines, the Paradox Launcher loads a blank window with the Paradox logo inside the loading spinner...then nothing. The launcher shows as "Not responding" and needs to be force-quit. I've replicated this same error sequence 6 times now. (Mac OS 12.5.1)

(The bug report requires I upload an attachment, so voila...)
